Use-Case Flow: Submit Trial Application

Clinical Trial Subject Recruitment Engine (Scenario 18, Healthcare & Telemedicine)

Student SRN: PES1UG25CS845

Use-Case ID	UC-04
Use-Case Name	Submit Trial Application
Primary Actor	Trial Candidate
Other Participants	Check Eligibility (UC-05), included use case performed by the system. No other actors.
Related Requirements	FR-001, FR-003, FR-004 (NFR-001 and NFR-002 apply)
Preconditions	• The candidate has a registered account (UC-01). • At least one clinical trial with status "Open" exists (created by a researcher, UC-06). • The system is available and the candidate has network access.
Postconditions	**Success:** An application with a unique ID and status "Submitted" is saved for the selected trial and candidate, and is available to the researcher for review (UC-07). **Failure:** No application is saved and the candidate's account data is unchanged.

Main Success Scenario

1. The candidate opens the system and enters an email and password (Login, UC-02).
2. The system authenticates the credentials and displays the candidate dashboard.
3. The candidate selects "View Clinical Trials" and the system lists all open trials (UC-03).
4. The candidate selects a clinical trial from the list.
5. The system displays the trial details: title, description, location, closing date and eligibility criteria.
6. The candidate selects "Apply" and the system displays the application form, with registered profile data filled in.
7. The candidate enters or confirms the required information (for example age, medical conditions and current medication) and gives consent.
8. The candidate submits the application.
9. The system checks that all mandatory fields are completed.
10. The system checks the information against the trial's eligibility criteria (<<include>> Check Eligibility, UC-05), and all criteria are met.
11. The system saves the application with status "Submitted" and a unique application ID.
12. The system displays a confirmation message showing the application ID. The use case ends.

Alternate Flows

A1 – Incomplete information (at step 9): The system highlights each missing or invalid field and does not save the application. The candidate corrects the fields and resubmits (return to step 8), or cancels and the use case ends without a saved application.

A2 – Candidate does not meet eligibility criteria (at step 10): The system does not save the application and displays a message naming each unmet criterion. The candidate returns to the trial list (step 3) or logs out. The use case ends without a saved application.

A3 – Invalid login credentials (at step 2): The system displays a generic error message and the candidate re-enters the credentials (step 1). After 5 consecutive failed attempts, the account is locked for 15 minutes and the use case ends.

Note: the form fields, eligibility criteria, lock-out rule and status values are design assumptions, as the scenario does not specify them.
